Text

Code

Text

Code

Output

Read the instructions

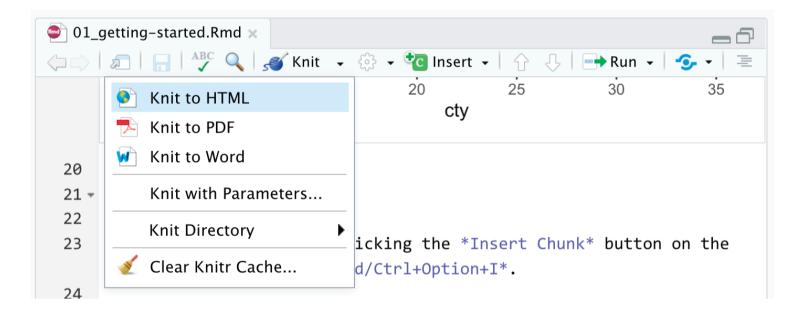

Run the code chunk by clicking the play button

Add a new chunk

Put 2 + 2 in the chunk and run it

Knitting

"Knit" an R Markdown document into a standalone sharable file

The best way to combine R code and narrative

We'll use it throughout the class:

I'll provide starter code

You'll complete "Your turns"

In the end, you'll have an annotated record for yourself

Spot the difference:

four_cyls <- filter(mtcars, cyl == 4)</pre>

Find these chunks in the notebook and run them. What's different about what happens?

<- assigns the output from the righthand side to a variable with the name on the lefthand side

four_cyls <- filter(mtcars, cyl == 4)</pre>

Environment pane

Clicking on an object in the environment panel opens it an interactive viewer tab

Functions

four_cyls <- filter(mtcars, cyl == 4)</pre>

Functions do things

Functions take arguments, output results

If you want to keep the output, assign it to a variable

To look up the help page for an R function, type this in the console:

?function_name

Help pane

Files	Plots	Packages	Help	Viewer		
$\langle \neg \neg \rangle$) 🏠 🕹	1	Q filter	⊗ ©		
R: Retur	n rows wi	th matching co	pic			

filter {dplyr}

R Documentation

```
Return rows with matching conditions
```

Description

Use filter() to choose rows/cases where conditions are true. Unlike base subsetting with [, rows where the condition evaluates to NA are dropped.

Usage

```
filter(.data, ..., .preserve = FALSE)
```

Arguments

. data A tbl. All main verbs are S3 generics and provide methods

These help pages prove details about the arguments you can supply a function

Often full of examples at the bottom

Look at the help page for seq

Add a chunk that uses seq() to create a list of numbers from 5 to 100, spaced by 5 (so 5, 10, 15, 20, ...)

seq(from = 5, to = 100, by = 5)

[1] 5 10 15 20 25 30 35 40 45 50 55 60 65 70 ## [20] 100

Common syntax problem #1

Missing closing parentheses or quotes

mean(mtcars

"Oops this is wrong

Common syntax problem #2

Surrounding something in quotes when it should be (or vice versa)

mean("mtcars")

- ## Warning in mean.default("mtcars"): argument is not numeric or ## NA
- ## [1] NA

There are three chunks under "Syntax gone wrong"

Run each, read the error message, and try to fix the syntax

Cheatsheets

Go to Help > Cheatsheets to find quick reference guides to different packages
